*"Brush your cares away,
with the BGRK!"*

BRUSH GROMMET KIT (BGRK)

Keeping the Cold Aisle "Cold" is always a challenge in today's data centre.

"How do you direct conditioned air and restrict hot air recirculation while facilitating cable management in the front of an enclosure?"

The answer is Karis' Brush Grommet Kit (BGRK). The kit consists of three pieces of 16 gauge, powder coated steel plating and four pieces of brush grommet along with easy-to-install hardware.

The BGRK mounts directly (and easily) to the Flexible Mounting Profile (FMP) built into every Karis E and ES Series Rails!

The kit is unique to Karis' enclosures as it mounts directly to our proprietary Flexible Mounting Profile (FMP), a series of holes along each rail, installed at one-RMU increments, and locates outside the standards for all EIA rail-mounted equipment. From copper bus bars to cable rings, mounting posts and other accessories, the FMP holes have provided Karis' customers with a number of flexible solutions inside the enclosure.

The design and manufacture of our rails is so strong that virtually nothing mounted to the FMP will take away from the dimensional stability of the rail itself.

The Brush Grommet Kit quickly installs with tool-less hardware. Since the FMP is outside of EIS standards, the BGRK is also a fast and easy upgrade to your existing, fully loaded enclosure. The kit comes in two sizes. Each kit can be installed at no charge as part of a new enclosure purchase or may be shipped as a package for easy aftermarket installation in any Karis E and EES Series cabinet.

Part No.	Description
BGRK24	Designed for 24" W x 78" and 84" high enclosures
BGRK30	Designed for 30" W x 78" and 84" high enclosures
